

June 28, 1940

Mr. B. L. Mathews  
Antimony, Utah

Dear Sir:

This will acknowledge receipt of your letter of June 20 together with a petition for the creation of a distribution system involving several canals in your vicinity diverting water from Coyote creek, a tributary of the Sevier East Fork.

Following my conference with you recently, Mr. J. L. Ogden, Commissioner of the Sevier river, came into the office and your difficulty was given careful consideration. Mr. Ogden is investigating matters carefully and, as I learned last night by telephone, he has arranged for a stream of water to be delivered for your use pending the time when a definite decision will have been reached, as is the best thing to be done under the circumstances. I hope to hear from him this afternoon.

You are no doubt aware of his action in this matter and, as I see it, you should be highly pleased with what has been done. I hope the entire matter will be adjusted soon.

Yours very truly,

T. E. Humpherys,  
STATE ENGINEER.
